

CSE 115A – Introduction to Software Engineering

Final Project Submission

The project ends with the completion of Sprint 4 (in the summer: Sprint 3). Project submission consists in creating a release branch in your software repository that contains the following elements:

- **Source code.** Contains everything necessary to install and run your system. This will be the basis for the demonstration and code review during the project review.
- **Test code (if any).** Include any automated tests you created (not required).
- **Scrum documents.** Include release plan, sprint plans, sprint reports, and team working agreements, including Definition(s) of Done and style guides.
- **Test Plan and Report.**
- **Release Summary Document.** Provide a list of key user stories with their acceptance criteria, a list of known bugs and problems, and product backlog.
- **Release documents.** As needed, include installation instructions (ReadMe file(s)), list of dependencies, user guide(s), design documents, etc.
